

Notice to Suppliers/Agents/Manufacturers

Base on restructuring process going on DCRP policies & procedures, we would like to inform you about the following steps that must be considered on submitting the products for assessment:-

- 1- No more new product application of porcelain insulator A.B switches, Disc insulator & line post top insulator will be received. That is due to objectives of shifting to the silicon rubber insulator types of above products. Therefore silicon rubber insulator products are required to be submitted.
- 2- Priority of evaluation and approval will take place for the attached list of material which does not have approvals or it has fewer manufacturers than DCRP requirements.
- 3- Except the heavy equipments like power transformers & switchgears, all other products submitted for approvals must be put under experiment at networks for a period of time as instructed by PAWG. Therefore it is mandatory to submit sample & do the installation in the presence of officials.
- 4- Type test certificates more than ten years old will not be accepted & if the manufacturer is from the same country of testing laboratory, then test must be witnessed by PAWG officials at the third party testing premises.
- 5- The preliminary results of products evaluation will be published monthly after PAWG meeting & factory evaluation visits will be decided by PAWG.

Regards

Chairman
Distribution Code Review Panel

Date: 19/7/2009

Products Main & Sub categories which are required by DCRP to submit approval applications for it as a priority.
